Multiples 1-10: Quick Recognition

Divisibility tricks for Grade 4 - no multiplication chart needed!

Multiple	Quick test	Example
1	Every whole number	47
2	Last digit is 0, 2, 4, 6, or 8	146
3	Add the digits; the sum is divisible by 3	123: 1+2+3=6
4	Last TWO digits are divisible by 4	316: 16 / 4 = 4
5	Last digit is 0 or 5	235
6	Pass BOTH the 2 and 3 tests	234: even; 2+3+4=9
7	Double the last digit; subtract from the rest. Result divisible by 7	203: 20 - (2 x 3) = 14
8	Last THREE digits are divisible by 8	1,024: 024 = 24
9	Add the digits; the sum is divisible by 9	729: 7+2+9=18
10	Last digit is 0	450

Remember: A number is a multiple of 6 only if it passes BOTH tests. For 7, repeat the trick if needed: 672 → 67 - 4 = 63, and 63 is divisible by 7.

Try it: Is 1,248 a multiple of 2, 3, 4, 6, and 8? (Yes to all five!)
